

I have an entry level position available that would be perfect for a student interested in the automotive field. It is a part time paid position that will also include on the job training for customer service and light automotive repair. Some responsibilities will include: Driving customers as part of our shuttle service, helping keep up with inventory, performing light maintenance on vehicles and equipment, and some other cleaning and organizing tasks. If you have any students that are looking for a summer job I would love to speak to them.

Thank you!
